

The 2005 Queensland Caravan Camping and Touring Holiday Show will mark the start of a new era in mobile homes, with the launch of the *Innovan Slide-On Camper*.

The *Innovan Slide-On Camper* will transform your tray back utility into an aerodynamic mobile shelter system.

The Camper provides superior protection from the elements with its canvas free design and weather proof ventilation system.

Developed and built in Queensland the *Innovan Slide-On Camper* is made from lightweight composite materials such as is used in yacht construction.

This lightweight slide-on design allows your vehicle to tow a boat or trailer without affecting the vehicle's performance on or off-road.

The composite furniture, walls and roof, structurally reinforce and insulate the Camper for Australia's rugged conditions.

Innovan Managing Director Welby Davidson says "the *Innovan Slide-On Camper* is the complete touring package, where you can take the comforts of home with you without the hassle of towing a van.

The Camper's aerodynamic qualities reduce drag on the vehicle and improve fuel economy."

The gas strut assisted awning, roof and fold down stairs only take seconds to set up and are just as easy to pack away when you need to move on.

More than twelve compartments provide plenty of room for storing your clothing and equipment which is never far from reach. Some compartments are accessible from the outside as is the roll out BBQ and stainless steel outdoor kitchen.

You can also feel safe and secure in the Camper with its solid walls, lockable windows and doors.

The screens, windows, ventilation, hot shower, toilet, fridge, freezer and internal kitchen also provide the comforts of home.

Other innovative features include the two gas strut assisted beds. These beds rise out of the way, allowing them to remain made for the duration of a trip.

The range of interior colour choices is based on Australian landscapes which serve as a visual reminder of your touring experiences.

Extensive research and development, industrial design, quality manufacturing techniques and application of advanced composite materials, have resulted in a new product which is unrivalled in the mobile home market.
